Clinical Prior Authorization Policy - Synthetic Hackathon Evidence Source

Section 1. General Eligibility

All prior authorization requests must include a documented pre-existing condition on file, confirmed by a licensed physician, dated at least 90 days prior to the request. Requests missing this documentation will be automatically flagged for manual review.

Section 2. Imaging Services (MRI, CT, X-Ray)

Imaging requests such as MRI of the lumbar spine require documented evidence of at least six weeks of conservative therapy, including physical therapy or prescribed pain management, attempted and logged in the patient chart prior to submission. A valid authorization code must be present in field 4 of the request form. Imaging performed more than twelve months prior to the current request date does not satisfy the recency requirement and must be repeated.

Section 3. Pharmacy and Medication Requests

Pharmacy requests must include a diagnosis code that matches the drug's approved formulary indication. Quantities requested must remain within a 30-day supply limit unless a chronic-condition override is separately documented and approved by a reviewing physician.

Section 4. Durable Medical Equipment (Insulin Pumps, CPAP, etc.)

Requests for insulin pumps require a documented HbA1c above 8.0 percent within the last 90 days, a referral from a credentialed endocrinologist on file, and evidence of a completed prior trial period with standard insulin delivery methods. Requests lacking any of these three elements will be denied pending additional documentation.

Section 5. Appeals Process

Denied requests may be appealed within 72 hours of the denial notice. Appeals must include updated chart notes, current vital signs, and a written clinical justification addressing each unmet criterion from the original denial. Appeals are reviewed by a peer physician and a written response is issued within 5 business days of submission.

Authority boundary: Administrative policy evidence only. This document does not authorize diagnosis, prescribing, or treatment.
