

FINAL CLINICAL DOCUMENTATION

Patient care dossier

Generated 13 Sep 2026 | 22:46 UTC from the selected longitudinal workspace

AP	Aarav Patel SIM-0427 EHR UKP189058 Active	RISK POSTURE HIGH
-----------	---	-----------------------------

AGE / SEX 57 / M	CARE SETTING Rural primary health centre	PRIMARY CONDITION Hypertension	LINKED EVIDENCE 7 records
----------------------------	--	--	-------------------------------------

CLINICAL SAFETY HOLD	Potassium 5.2 mEq/L exceeds the 5.0 mEq/L safety threshold for the proposed Lisinopril candidate. The candidate remains blocked pending clinician review.
-----------------------------	---

01 Clinical context

PRE-CONSULTATION SUMMARY Aarav Patel is a 57-year-old patient with hypertension diagnosed in 2008. Control remains suboptimal despite active amlodipine therapy. The longitudinal record includes a penicillin allergy and a new elevated potassium result requiring medication reconciliation before treatment changes.	CURRENT CONSULTATION Blood pressure remains high. The spoken plan proposes Lisinopril 10 mg once daily and review in two weeks.
--	---

02 Diagnostics and observations

MEASURE	LATEST VALUE	INTERPRETATION
Laboratory	Potassium 5.2 mEq/L	HIGH
Blood pressure	168/96 mmHg	Latest observation
BMI	31.4	Longitudinal signal
Care frequency	4	Follow-ups / year

03 Medication, allergy and risk reconciliation

ACTIVE MEDICATIONS Amlodipine 10 mg daily	ALLERGIES Penicillin	PATIENT-SPECIFIC RISKS Potassium 5.2 mEq/L, Proposed ACE inhibitor candidate, Blood pressure above goal
--	---------------------------------------	--

CLINICAL REVIEW

Assessment and accountable plan

Patient: Aarav Patel | Case: SIM-0427

04 Clinical assessment

Hypertension - Suboptimal control. Risk signals: Potassium 5.2 mEq/L, Proposed ACE inhibitor candidate, Blood pressure above goal.

05 Clinician-owned follow-up

- 01 Verify the reconciled longitudinal record and the patient-specific risk signals.
- 02 Continue Hypertension follow-up at the documented cadence.
- 03 Repeat potassium and reassess the blocked candidate before any medication decision.

06 Verified agent documentation

Clinical documentation note:

PATIENT

Aarav Patel (UKP189058)

KEY SIGNAL

Lisinopril 10 mg once daily remains BLOCKED because potassium is 5.2 mEq/L, above the configured 5.0 mEq/L safety threshold.

ASSESSMENT

Hypertension remains above goal. The medication candidate conflicts with the latest structured laboratory result and requires clinician review.

PLAN

Continue current documented therapy while the responsible clinician reviews renal function, repeats potassium, and selects an appropriate next step. No prescription was issued autonomously.

CONFIDENCE

0.99. All claims are linked to the selected patient's longitudinal records and policy evidence.

07 Governance and sign-off

EVIDENCE LINEAGE	VERIFICATION	AUTHORITY
7 linked records	13/14 checks passed	Clinician decision required
Clinician name / identifier	Signature	Date / time
